WONCA Global Standards for Postgraduate Family Medicine Education

A guide for program development

WONCA Working Party on Education
2016
1. Overview

2. Checklist for the WONCA Global Standards for Post Graduate Family Medicine Education

3. Pre-visit or Self-study Questionnaire
1. OVERVIEW

Background

In June 2013, WONCA World Council approved the WONCA Global Standards for Postgraduate Family Medicine Education. The Standards aim to enhance family medicine education globally, facilitate training programs to share expertise and learn from each other, and promote Family Medicine as a discipline. They were developed through an iterative process over 6 years, involving on-line discussions, meetings, workshops and conferences where interested family medicine teachers from across the globe discussed the critical elements in the educating physicians to become family doctors/general practitioners.

This handbook is to be used in conjunction with the Standards themselves, although it may be useful as a preliminary overview in determining how the Standards might be useful for an individual educational program.

The WONCA Standards

In recognition of the global diversity of health care systems, resources, and experience in family medicine education programs, the standards have been developed in two levels: basic and quality development. Basic level represents the fundamental standards that all programs should strive to attain, and quality development standards are those that require more expertise and resources but are highly desirable.

The Standards have been organized into nine Areas each with several Sub-areas, with descriptions and annotations to provide further explanation. Each standard has both a basic level and a quality improvement level. It may be overly simplistic to consider that the basic level standard is intended for educational programs which are new, developing or have fewer resources, while the quality improvement standards are aspirational for longstanding and well resources programs. It is more than likely that any educational program will fail to achieve standards at the basic level, and will achieve some at the quality improvement level. However, the bi-level standards provide a range of achievement for educational programs to measure themselves against, appropriate for their various contexts and stages.

Because these Standards are intended to be used globally, and in the very diverse contexts in which family medicine is practiced, they are necessarily quite broad in nature, and can be adapted for the local environment.

There are several key themes running throughout these Areas and Sub-areas, reflecting what WONCA considers to be best practice in postgraduate family medicine education, in addition to traditional aspects of curriculum, assessment, resources etc.
I. **Promotion of program quality improvement**
   This includes elements of program evaluation; the examination of outcomes such as graduate performance and work place tracking; feedback from trainees and trainers; engagement in external reviews etc.

II. **Promotion of family medicine as central to the training of family doctors**
   Family doctors and settings where family doctors work are essential components in the education of the discipline's future practitioners. While other contexts are useful to provide focused skill development, the majority of training time should be in the hands of family doctors.

III. **Training programs responsive to community needs**
   Family physicians practice differently in different parts of the world because the needs of their communities and their patients are very diverse. Elements such as the engagement of stakeholders in the program, adapting the program to the future practice of trainees and program efforts to assess and meet the community needs are included in the standards.

IV. **Learner-centred educational program**
   The balance between service and education draws attention, as does the support provided to trainees. Trainee involvement in program development is another aspect of a learner-centred educational program.

**Potential Uses of the Standards**

a. **New Program Development**
   When a program to train family doctors/GPs is being developed, the WONCA Standards provide a useful blueprint to ensuring that all the relevant Areas have been considered and planned for. The standards provide desired outcomes for each Area. As well, because these are global standards, from a credible organization, program leaders can use the WONCA Standards to advocate for their requirements in implementing the desired program with funders and relevant stakeholders.

b. **Self-Assessment and Program Quality Improvement**
   Educational programs already training family doctors should all be engaged in program quality improvement, continually examining their program and striving to improve it. The WONCA standards can be used as a framework for such activities. An educational program may decide to assess its performance on all or several of the Standards, using a quality assurance cycle (example – plan, implement, evaluate, review). By using the Standards as an external guide, blind spots and unrecognized issues may be uncovered leading to program improvements.

c. **Peer Review**
   There are great benefits in having external family medicine teachers and program leaders review the educational program to provide fresh perspective and clear evaluations. This can be a powerful tool for change. Peers can use the Standards as a template for such reviews, and the accompanying tools (questionnaire, checklist) may also facilitate this activity. This may be part of a formal accreditation process, or a less formal review.
d. **Accreditation of Medical Programs**

   The accreditation of medical programs is a cyclical quality improvement process, in which an educational program is assessed against predetermined, external standards. The cycle consists of a self-assessment, an external evaluation, planning for improvements, followed by further self-assessment and so on. It is not expected that a program is going to meet each and every standard: for this to be the case, standards would be have to be set too low for this to meet the quality improvement purpose. These standards may be used for external accreditation processes such as this. For guidance, the World Federation for Medical Education has produced an excellent guide to accreditation for basic medical education which can readily be adapted to postgraduate programs.

   http://wfme.org/accreditation

---

e. **WONCA Accreditation**

   It is possible for postgraduate family medicine education programs to apply for official WONCA accreditation. Please see the Guide to WONCA Accreditation for details of this process.
This checklist may serve as a quick guide, or reference, to the full Standards. It is important to note that the Standards themselves include many more details and explanations, and this checklist is not a substitute for that document. However, it can be used in preparing a self study or review, as well as in developing new postgraduate programs in family medicine education.

<tr>
<td>1.1 Statement</td>
<td>☐ Describes the post-graduate practice -based learning process that results in family doctors able to practice competently</td>
<td>☐ Encourages innovation in training</td>
<td></td>
</tr>
<tr>
<td></td>
<td>☐ Encourages innovation in training</td>
<td>☐ Encourages trainees to become scholars and life-long learners</td>
<td></td>
</tr>
<tr>
<td>1.2 Participation in formulation of statement</td>
<td>☐ Statement defined and adopted by principle stakeholders</td>
<td>☐ Statement based on input from wider range of stakeholders</td>
<td></td>
</tr>
<tr>
<td>1.3 Professionalism and autonomy</td>
<td>☐ Training process based on approved basic medical education</td>
<td>☐ Training fosters autonomy</td>
<td></td>
</tr>
<tr>
<td>1.4 Training outcomes</td>
<td>☐ Authorities, in consultation with FM and other professional organizations, define competencies which must be achieved by FM trainees</td>
<td>☐ Authorities define both broad and specific competencies</td>
<td></td>
</tr>
<tr>
<td></td>
<td>☐ Measures of competencies used to develop program</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
## 2. Training Process

### 2.1 Learning Approaches
- follows a systematic program
- Training is practice based
- Encompasses reflective observation, theoretical concepts, active participation and practical experiences
- Trainee guided by supervision, regular appraisal and feedback
- Ensures increasing independence and responsibility

### 2.2 Scientific Methods
- Trainee achieves knowledge of scientific basis and methods of FM
- Trainee is familiar with evidence based medicine and critical decision making specific to FM
- Formal teaching about information management, critical literature appraisal, quality improvement, evidenced based medicine and scientific data is provided
- Trainee is exposed to research

### 2.3 Training Content
- Care across continuum of prevention, health promotion, acute and chronic care, rehabilitation and palliative care
- Care across the spectrum of patients, all ages and genders, with a variety of problems
- Continuity of care over time
- Undifferentiated patient care
- Psychosocial and cultural aspects of health care
- Communication skills
- Understanding of doctor patient relationship issues
- Use of medical records and communication with other health care workers
- Knowledge of:
  - bioethics
  - medical –legal issues
  - quality assurance
  - community medicine
  - health promotion and disease prevention
  - the health care system
- Ensures development of FM expert in:
  - health advocacy
  - communication
  - collaboration
  - team-work
  - scholarship
  - administration
  - management
  - professionalism

4. PRE-VISIT OR SELF-STUDY QUESTIONNAIRE

The completion of this questionnaire provides postgraduate educational programs with an opportunity to assess the various components of their program against the WONCA Global Standards. The actions outlined in the questionnaire are a form of self-study, or can be used for external review. For external reviewers, completion of the questionnaire is an invaluable step both in understanding the educational program and its operation. It also serves to provide external reviewers with needed materials. The materials should be provided well in advance of any visit by an external reviewer to facilitate a focused and productive visit.

WONCA Global Standards for Postgraduate Family Medicine Education Program Pre-Visit Questionnaire

1. Mission and Outcomes

1.1 Provide copies of the accreditation documents or statements which define the basis for the outcome objectives in family medicine postgraduate education and describe how these are used in by the educational programs in your setting, or under your jurisdiction.

1.2 Briefly describe the process by which these have been developed and reviewed.

1.3 Provide a document containing the competencies that trainees are required to achieve as a result of their training programs.

2. Training Process

2.1 Describe the prescribed training program, including the family medicine specific components, and any additional experiences or placements, both clinical and non-clinical. A schematic outline may be helpful.

2.2 What is the required degree of involvement of the family medicine training program and family physician teachers/preceptors in each of these experiences?

2.3 What is the expected role of the trainee in delivering patient care?

2.4 How is trainee supervision, feedback and assessment organized during the clinical components of the programs?

2.5 In what ways are programs expected to provide trainees with gradually increasing responsibility over their training?

2.6 Describe the expected balance between clinical service and education in the programs and how programs are required to monitor this.

2.7 How are educational programs organized in your jurisdiction, and what are the requirements for governance and accountability?

2.8 What is the required role of trainees and other stakeholders in the governance of the program?
3. Assessment of Trainees

3.1 Describe the standards that refer to the process of assessing trainees, including the methods required of the training programs as well as any methods or examinations administered by the jurisdiction or College, both in-training or formative and terminal. Indicate the relationship between these methods and the nature of clinical practice.

3.2 What are the requirements for the provision of feedback to trainees and for direct observation of their clinical performance during day-to-day clinical duties?

3.3 Describe the appeal mechanisms that are required at the training program level and at the level of the College or other authority.

4. Trainees

4.1 What are the standards for the conduct of admission to postgraduate training programs?

4.2 How are the numbers of trainees accepted into educational programs determined?

4.3 Describe the requirements for support, counselling and career guidance designed to meet the needs of trainees.

4.4 Describe the nature of trainees' duty hours. What are the requirements for balancing service and education e.g. contracts?

4.5 How are interruptions to training (sickness or parental leave, military duty etc) and part time training positions handled?

4.6 How are trainees represented in the evaluation of the training program and their working conditions?

5. Staffing

5.1 What are the required qualifications and responsibilities for trainers in the training programs?

5.2 What are the requirements for support of staff in their work as trainers, by the educational program and by the larger educational system?

5.3 What are the requirements for teaching of trainees during clinical placements?
6. Training Settings and Clinical Resources

6.1 Describe the expectations for the training sites in the educational programs. How are these monitored for appropriate variety, volume and case mix?

6.2 What is the expected experience for trainees in working with other health care professionals and in multi-disciplinary teams?

6.3 Describe possible outcomes if a training site is found to no longer be appropriate for family medicine trainees.

6.4 What are the requirements for the physical facilities of training locations, including tools for information management?

6.5 What are the standards for communication and information technology for learning and patient care in the training programs?

6.6 Describe the expectations of trainees with respect to research during their training program.

6.7 How are educational experts engaged in the educational programs and what are the requirements for this involvement?

6.8 What is the policy for training experiences outside the trainee's home program, either within or outside the country?

7. Evaluation of Training Process

7.1 What mechanisms are used to evaluate the outcomes of the training program.

7.2 What mechanisms are used to evaluate the effectiveness of the training system as a whole?

7.3 Describe the involvement of stakeholders with respect to the results of the evaluation of training programs.

8. Governance and Administration

8.1 What is the required or accepted governance structure of training programs, and under what authority? Highlight in particular the roles of family medicine organizations and family physicians in this governance.

8.2 How is the completion of training recognized, and under what authority?

8.3 In addition to family medicine training, are there defined subspecialties of family medicine with training programs? Please list any, with resulting credentials and the authority under which these are recognized. Examples vary by country, but might include palliative medicine or emergency medicine.

8.4 What are the requirements for management and quality improvement of each training program? How is this implemented? Are there formal outcome measures? If so, please specify.
9. Continuous Renewal

9.1 Describe how the College or authority is involved in reviewing and updating the structure, function and quality of the training programs.

9.2 What studies or data have informed review of postgraduate programs in the last 5 years?

9.3 What standards support each training program in responding to societal needs and to new information and best practices in medical education?

Curriculum

What are the curricular requirements in the following areas?

- Medical knowledge in the basic biomedical, clinical, behavioural sciences, medical ethics and medical jurisprudence, and the application of such knowledge in patient care
- Interpersonal and communication skills that ensure effective information exchange with individual patients and their families and teamwork with other health professions, the scientific community and the public. This should include the acquisition of the competencies of patient centered care, relationship centered care, or similar concepts.
- Life long learning, including the appraisal and utilization of new scientific knowledge to continuously update and improve clinical practice
- Function as supervisor, trainer and teacher in relation to colleagues, medical students and other health professions
- Capability to be a scholar contributing to development and research in the chosen field of medicine
- Professionalism, committed to the health of patients and community, through ethical practice, and high personal standards of behavior. This includes willingness to acknowledge error and deal with its consequences.
- Knowledge of public health and health policy issues and awareness and responsiveness to the larger context of the health care system, including for example the organization and integration of health care, partnership with health care providers and managers, practice of cost-effective health care, health economics, and resource allocations
- Ability to understand healthcare, and identify and carry out system-based improvement of care.
- Ability to collaborate with other members of the health care team, as well as with patients, both as individuals and as families.
- Interest and ability to act as an advocate for the patient and community
- Being community-based with a sense of social accountability: understanding the health status and needs of the community served in order to develop and provide appropriate services. This includes taking into account the incidence and prevalence of diseases in the community and psychosocial problems including those pertaining to women and children in approaching health care problems
- Provision of service to patients across the continuum of health promotion, disease prevention, acute/emergency, chronic, rehabilitative, and palliative care.
- Provision of care across the spectrum of patients (all ages from birth to death, all genders, and with the variety of problems seen in family medicine), with experience in
an adequate patient base to experience this diversity in adequate volume for learning and to attain required competencies. This includes assessment, diagnosis, and appropriate management at levels appropriate to the setting, both medical and surgical/procedural.

- The experience of continuity of care – responsibility for a group of patients over time with an appropriate attitude towards the establishment of enduring relationships and ongoing commitment to patients over time, place, and state of health.
- Skills for dealing with undifferentiated patient care problems, such as decision making in the face of uncertainty, and management of the many variables in multisystem disease
- Skill in dealing with the psychosocial and cultural aspects of health care with specific academic programming as well as clinical experiences directed towards learning in this area.
- Communication skills in general, including specific interviewing skills such as dealing with difficult encounters with patients and families, communicating uncertainty to patients, and the ability to engage the patient in decision-making.
- Knowledge and understanding of the doctor patient relationship, including issues of appropriate boundaries and issues of intimacy and power dynamics in that relationship
- The appropriate use of medical records and communication with other health care providers
- Knowledge of bioethics, and understanding of a framework for bioethics, with ability to apply it in the clinical decision making process.
- Familiarity with medical legal issues relevant to their own setting
- An understanding of quality assurance as applied to family practice, with skills to assess the performance of some aspects of care delivered by the practitioner personally.
- Basic understanding of community medicine/public health, including an understanding of the non-biologic determinants of health and the impact of these on patients seen and the community served.
- An understanding of the concepts of health promotion and disease prevention, with an ability to actively engage in these dimensions of care in the practice setting
- Knowledge of the health care system, including use of community resources in providing care to patients where the family physician functions as the coordinator of such care.
