WONCA Global Standards for Postgraduate Medical Education

September 2025

Lead Authors:

Prof. Victor Ng (Canada - Chair, WONCA Working Party on Education)

Prof. Nagwa Nashat (Egypt - Chair-Elect, WONCA Working Party on Education)

Prof. Marie Andrades (Pakistan - Honorary Treasurer, WONCA Working Party on Education)

Acknowledgement:

The WONCA Working Party on Education would like to acknowledge members of the WONCA Working Party on Education executive for their thoughtful review and contributing perspectives:

Dr. Bola Fatusin (Nigeria), Dr. Brunee Dorsett (Bahamas), Dr. Laura Goldman (USA), Professor Carmen Carbezas (Ecuador), Dr. Fabian Dupont (Germany), Professor Akye Essuman (Ghana), A/Professor Krishna Suvarnabhumi (Thailand).

The WONCA Working Party on Education would further like to acknowledge the following members for their participation on focus groups to prepare this updated version.

Aya Ayoub (United Kingdom), Dr. Elizabeth Reji (South Africa), Professor Hirotaka Onishi (Japan), Dr. Inge Schabort (Canada), Dr. Meena Nathan Cherian (Switzerland), Dr. Victoria Tkachenko (Ukraine).

WONCA Global Standards for Postgraduate Medical Education

WONCA Working Party on Education 2025

Background:

In June 2013, WONCA World Council approved the WONCA Global Standards for Postgraduate Family Medicine (FM) Education. The initial document was an adaptation of the Postgraduate Medical Education World Federation for Medical Education (WFME) Global Standards for Quality Improvement. It may be helpful to review the original document, available at http://www.wfme.org/. The standards were modified to fit the requirements of family medicine training specifically, as the World Federation for Medical Education standards deal with postgraduate training in general. Specific content areas and training sites relevant to Family Medicine were therefore included in the WONCA standards.

The Standards aim to enhance FM education globally, facilitate training programs to share expertise and learn from each other, and promote Family Medicine as a discipline. The Standards also emphasize FM programs as central to the training of family doctors, the importance of Quality improvement of programs based on their core, which is based on community needs, and a learner-centered approach. Recognizing that modern trends in medical education and FM training are evolving, the WONCA Working Party on Education (WWPE) embarked to conduct a review of the literature and consultation through stakeholder groups. This process started in 2021.

The initial Standards were developed through an iterative process spanning four years and underwent regular review and updates, involving online discussions, meetings, workshops, and conferences were interested family medicine teachers from around the globe discussed the critical elements in educating physicians to become family doctors or general practitioners.

The term family medicine is used in this document to define the discipline: however, general practice, family practice and primary care are also appropriate terms that are used in some settings for this profession. It is the standards that are important rather than the terms that are being used. The nature of discipline is one which is based in the community which it serves and fundamentally is relationship-based care that endures over place and time, regardless of which of the terms are used to describe it. Family Medicine is a discipline that provides long-term person-centered and comprehensive and continuing care, from pre-natal to palliative care, across all ages and in all settings**.**

The WONCA Standards

In recognition of the global diversity of healthcare systems, resources, and experience in family medicine education programs, the standards have been developed at two levels: basic and quality development. Basic level represents the fundamental standards that all Family Medicine programs must strive to attain, and quality development standards are those that require more expertise and resources but are highly desirable.

The Standards have been organized into nine *Areas,* each with several *Sub-areas,* with descriptions and annotations to provide further explanation. Each standard has both a ‘basic’ level and a ‘quality improvement’ level. It may be overly simplistic to consider that the basic level standards are intended for new educational programs, those in development, or those with fewer resources. In contrast, the quality improvement standards are aspirational for longstanding and well-resourced programs. The objective/aim of the WONCA Global Standards for PG Family Medicine Education programs is to promote/encourage the establishment of a Family Medicine postgraduate program and provide guidance towards a robust, sustainable, and quality education to enable a safe family medicine practice everywhere in the world in the local context.

These Standards are intended to be used globally, in the diverse contexts in which family medicine is practiced; therefore, they are necessarily quite broad in nature and can be adapted to the local environment.

Potential Uses of the Standards

a. New Program Development

When a program to train family doctors/GPs is being developed, the WONCA Standards provide a useful framework to ensure that all the relevant *Areas* have been considered and planned for. The standards provide desired outcomes for each *Area* without being too prescriptive recognizing regional variation and context in medical training. As well, because these are global standards, from a credible organization, program leaders can use the WONCA Standards to advocate for their requirements in implementing the desired program with funders and relevant stakeholders.

b. Self-Assessment and Program Quality Improvement

Educational programs already training family doctors should be engaging in program quality improvement, continually examining their program and striving to improve it. The WONCA standards can be used as a framework for such activities. Educational programs may decide to assess its performance on all or several of the Standards, using a quality improvement and assurance cycle (example – plan, do, study, act). By using the Standards as an external guide, blind spots and unrecognized issues may be uncovered leading to program improvements.

c. Peer Review

There are great benefits in having external family medicine teachers and program leaders review the educational program to provide a fresh perspective and precise evaluations. This can be a powerful tool for change. Peers can use the Standards as a template for such reviews, and the accompanying tools (questionnaire, checklist) may also facilitate this activity. This may be part of a formal accreditation process, or an informal review aimed at continuous quality improvement.

d. Accreditation of Medical Training Programs

The accreditation of medical programs is a cyclical quality improvement process in which an educational program is assessed against predetermined, external standards. The cycle consists of a self-assessment, an external evaluation, planning for improvements, followed by further self-assessment, and program refinement. It is not expected that a program is going to meet every standard - for this to be the case, standards would have to be set too low for this to meet the quality improvement purpose. These standards may be used for external accreditation processes such as this.

e. WONCA Accreditation

Postgraduate family medicine education programs can apply for official recognition WONCA accreditation. Please see the Guide to WONCA Accreditation for details of this process.

WONCA Postgraduate Education Standards

Area	Basic Standards Must	Standards for Quality Development Should	NOTES
1. MISSION AND OUTCOMES			
1.1 Statement	• Describes the post-graduate practice–based learning process that results in family Doctors being able to practice competently	• Encourages innovation in training • Encourages trainees to become scholars and lifelong learners	
1.2 Participation in formulation of statement	• Statement defined and adopted by the principal stakeholders	• Statement based on input from a broader range of stakeholders	
1.3 Professionalism and autonomy	• Training process based on approved basic medical education • Training fosters autonomy and graded responsibility.		
1.4 Training outcomes	• Authorities, in consultation With FM and other professionals organizations, define competencies which must be Achieved by FM trainees	• Authorities define both broad and specific competencies • Measures of competencies used to develop program	

Area	BASIC STANDARD MUST	STANDARD FOR QUALITY DEVELOPMENT SHOULD	NOTES
2. TRAINING PROCESS			
2.1 Learning approaches	• Follows a systematic program • Training is practice-based • Encompasses reflective observation, theoretical concepts, active participation and practical experiences • Trainee guided by supervision, regular appraisal and feedback • Training Fosters increasing Independence with graded responsibility to ensure patient safety	• Interfaces with basic medical education and continuing medical education/professional development • The trainee has access to educational counselling, coaching, mentorship, and ongoing support	
2.2 Scientific methods	• Trainee achieves knowledge of scientific basis and methods of FM • The trainee is familiar with evidence-based medicine and critical decision making to FM	• Formal teaching about information management, critical literature appraisal, quality improvement, evidence-based medicine And scientific data is provided • Trainee is exposed to research skills • Program addresses effective use of technology with the aim of keeping relevant patient documents and management	
2.3 Training content	• Care across the continuum of prevention, health promotion, acute and chronic care, rehabilitation and palliative care • Care across the spectrum of patients of all ages and genders, With diverse problems • Continuity of care over time • Undifferentiated patient care • Psychosocial and cultural aspects of health care • Communication skills • Understanding of a doctor patient relationship issues • Use of medical records and communication with other health care workers	Ensures the development of FM expert in: • health advocacy • communication • collaboration • teamwork • scholarship • administration • management • professionalism • Integrating systematic training on safety practices (e.g., root cause analysis, communication tools like SBAR)	

Area	BASIC STANDARD MUST	STANDARD FOR QUALITY DEVELOPMENT SHOULD	NOTES
	Knowledge of: • bioethics • medical–legal issues • quality assurance • community medicine • health promotion and disease prevention • the health care system • Integrate patient safety training (e.g., error reporting, root cause analysis) into clinical rotations and simulations.	• Involve trainees in safety audits and quality improvement projects	
2.4 Training structure, composition, and duration	• Overall structure composition and duration is clearly stated • Compulsory and optional Components are clearly stated	• Integration of practice and theory ensured in training process • Training employs technology and e-learning modalities as appropriate • Training should be tailored based on the eventual expected scope of practice of the trainee	
2.5 Relationship between training and service	• The process of an Apprenticeship is described and respected • Formal agreements assure integration of training and service • Supervision guides learning through service activities • Appropriately remunerated for providing service and patient care within the context of learning.	• Capacity of health care system utilized for service based training • Training is not subordinated to service demands • Permanent FM advisor provides mentorship	
2.6 Management of training	• Authority and responsibility are clearly defined • Coordinated training within FM is ensured	• Authority is provided with resources for planning, implementation, assessment and innovation • FM education experts, trainees and other stakeholders are represented	

AREA	BASIC STANDARD MUST	STANDARD FOR QUALITY DEVELOPMENT SHOULD	NOTES
3. ASSESSMENT			
3.1 Assessment methods	• The method and process are clearly defined • The method includes formative and constructive feedback	• Reliability and validity of Methods are documented • External FM examiners are included • A complementary set of methods are applied • Logbook portfolio is used to record stages in acquisition of skills including the use of electronic tracking or portfolios as appropriate. • Appeal mechanism is present • Supplemental training/remediation training is supplied if needed	
3.2 Relationship between assessment and training	• Assessment is compatible with training objectives • Promotes learning • Documents progress through the program • Documents readiness to practice FM at the completion	• Encourages trainee curiosity for further learning Workplace assessments should be employed to simulate real-life practice • Assesses predefined practice requirements • Assesses knowledge, skills and attitudes • Encourages interaction between clinical practice and assessment	
3.3 Feedback to Trainers	• Constructive feedback and coaching is given on ongoing basis • Participation (in teaching) is rewarded and appropriately remunerated when appropriate.	• Acceptable performance standards are explicitly specified and conveyed to both trainees and supervisors	

AREA	BASIC STANDARD MUST	STANDARD FOR QUALITY DEVELOPMENT SHOULD	NOTES
4. TRAINEES			
4.1 Admission policy and selection	• Competent authorities and FM professional organizations agree on a policy for criteria and process • Policy is published and implemented • Procedure includes a mechanism for monitoring and appeal	• Policy defines cognitive and non-cognitive criteria • Procedure is transparent • Selection is open to all qualified graduates	
4.2 Number of trainees	• Number is balanced for resources to ensure training and teaching of adequate quality	• Number is reviewed with relevant stakeholders • Number is changed with attention to community and society needs, and market forces	
4.3 Support and counselling of trainees	• System of support, counselling and career guidance is ensured • Counselling addresses social and personal needs of trainees with the aim of maximizing wellness and burnout prevention • The program provides access to wellness resources (e.g., counseling, peer support) and monitor trainee well-being.	• Counselling is provided based on monitoring the progress in training and incidents reported • Counseling addresses social and personal needs of trainees with the aim of maximizing wellness and burnout prevention • The program integrates structured wellness curricula (e.g., resilience training, mindfulness) and evaluates their impact on burnout • Strategies for building resilience in trainees is implemented	**Wellness** **Workplace safety** **Remuneration**
4.4 Working conditions	• Training is carried out in appropriately remunerated posts/stipendiary positions • Posts include all medical activities commonly expected of family physicians which may include on-call duties • Conditions and Responsibilities, including duty hours, are defined and made known to all parties • Trainees receive fair remuneration commensurate with their roles and local living costs. • Programs establish policies against	• Service components are not be excessive • Structure of duty hours considers the needs of patients, continuity of care and educational needs of trainee • Part-time training is allowed under special circumstances • Total duration and quality of part-time training is not less than full-time	

	harassment/discrimination, with confidential reporting mechanisms. • Duty hours must comply with Local authority limits to prevent burnout.	• Interruption of training is replaced with additional training • The program benchmarks compensation against international standards to reduce financial stress and attrition	
4.5 Trainee representation	• There is a policy on trainees participation in the design of program, working conditions and other matters relevant to trainees	• Organizations of trainees are involved in decisions about training processes, conditions and regulations	

AREA	BASIC STANDARD ***MUST***	STANDARD FOR QUALITY DEVELOPMENT ***SHOULD***	Notes
5. STAFFING			
5.1 Appointment policy	• Policy specifies: - appointment of trainers, supervisors, and teachers with specific expertise Duties and responsibilities of training staff addresses the balance of educational and service functions of training staff Family physicians have a primary role in the education of trainees	• All physicians recognize their professional responsibility to train doctors in practice settings Participation is rewarded and appropriately remunerated • Policy ensures that trainers are current and up to date In the relevant fields. • Subspecialist trainers are approved for relevant specific periods during the training program	
5.2 Obligations and development of trainers	• Teachers and trainers are prepared for their educational roles and informed of their responsibilities • Teaching activities are included in trainers' work schedules • The teaching activities in relationship to the work schedules of trainees are specified.	• Policy includes: - support of trainers and an organized program for training as teachers • Ensure appropriate administrative support for trainees to participate as teachers in the education program. • Opportunities for development and advancement of trainers, appraisal, and recognition of meritorious academic activities • Ratio of trainers to trainees ensures close personal contact and monitoring of trainee	

AREA	BASIC STANDARDS *MUST*	STANDARDS FOR QUALITY DEVELOPMENT *SHOULD*	Notes
6. TRAINING SETTINGS AND EDUCATIONAL RESOURCES			
6.1 Clinical settings and patients	• Locations are selected and recognized by competent authorities. Specify these component authorities. • The supply of sufficient clinical/practical facilities to support training is ensured • The supply of sufficient numbers of patients and case mix to meet training objectives is ensured • Trainee is exposed to a broad range of experience appropriate to the local context, including office, hospital and on-call activities • The number of patients and case mix allows for experience in all aspects of FM, including health promotion and prevention	• The quality of settings is regularly monitored • Trainees follow a group of patients over time and place • Trainees see a diversity of problems that represent the full spectrum of FM • Trainees should learn in settings in which they will eventually practice.	
6.2 Physical facilities and equipment	• Space and opportunity for practical and theoretical study is supplied • Access to professional literature is ensured • Equipment for training in practical techniques, such as procedural skills, is available. Trainees have access to tools of information management in areas of patient care	• Physical facilities and equipment are evaluated regularly for appropriateness and quality	
6.3 Clinical teams	• Trainees have experience working in a team with FM physicians and other health professionals	• Training allows learning in a multi-disciplinary team so that trainee works effectively as member or leader	
6.4 Information Technology (IT)	• The program implements policies for IT use in training (e.g., EHRs, telemedicine, e-portfolios) and data privacy to enhance patient care and learning. • Policy addresses the effective use of technology to keep relevant	• The program incorporates AI/digital health tools (e.g., diagnostic apps) into curricula. • Trainers and trainees are competent in using technology for self-	

	patient documents and management	learning, accessing data, and working in health care systems	
6.5 Research	• Policy fosters the application of research into practice in training settings	• Opportunities for combining clinical training and research are available ·.Trainees are encouraged to engage in health care quality research	
6.6 Educational expertise	• Policy on use of expertise relevant to the planning, implementation and evaluation of training	• Access to educational experts is available -·.Use of expertise is documented for use in staff development (including faculty development) and research in postgraduate FM	
6.7 Training in other settings and abroad	• Policy on accessibility of individualized training opportunities at other sites within or outside of the country that fulfill the requirements of training • Policy for transfer of credits	• Regional and international exchange of academic staff and trainees are facilitated by resources ·. • Authorities establish relations with national or international bodies to facilitate exchange and mutual recognition of training	

AREA	BASIC STANDARDS *MUST*	STANDARDS FOR QUALITY DEVELOPMENT *SHOULD*	Notes
7. EVALUATION OF TRAINING PROCESS			
7.1 Mechanism for program evaluation	• Authorities and FM professionals establish a mechanism for evaluation • The Training process, facilities, and progress of trainees are monitored • Process ensures that concerns are identified and addressed	• The context of the training process, the structure and specific components of the program, and other outcomes are assessed. •Quality improvement as made iteratively based on evaluative feedback.	
7.2 Feedback from trainers and trainees	• Feedback about the program from both trainers and trainees is systematically sought. Feedback is analyzed • Feedback is acted on	• Trainers and trainees are actively involved in planning the program evaluation and using results for program development	
7.3 Using trainee performance	• Performance of trainees is evaluated in relation to the training program • Performance is assessed regarding the mission of postgraduate FM education	• Performance is: - analyzed in relation to background and entrance admission qualifications - Used to provide feedback to committees responsible for the selection of trainees, used to provide feedback for program planning and counseling	
7.4 Authorization and monitoring of training settings	• The program is authorized by the competent authority based on well-defined criteria and program evaluation • Authority can grant or withdraw recognition of training settings (and or theoretical courses- theory and practical is part of the training course, therefore 'Theoretical' can be deleted)	• Authorities establish a system to monitor training settings and other facilities via site visits or other valid and reliable means	

7.5 Involvement of stakeholders	• Processes and outcomes of evaluation involve managers and administrators of practice settings • Evaluation processes and outcomes involve trainers and trainees • Evaluation processes and outcomes are transparent to all stakeholders (specify this)	• Processes and outcomes of evaluation are credible to all principal stakeholders	

AREA	**BASIC STANDARDS** ***MUST***	**STANDARDS FOR QUALITY DEVELOPMENT** ***SHOULD***	**Notes**
8. GOVERNANCE AND ADMINISTRATION			
8.1 Governance	• Training is following the regulations concerning structure, content, process, and outcome issued by the competent authorities • Completion of training is documented by degrees, diplomas, certificates, or other evidence of formal qualifications • Documentation is conferred as a formal recognition of a competent FM physician by the authorities • Authorities continually access training programs, institutions, and trainers • Authorities are responsible for setting up programs for quality training	• Procedures are developed to verify documented completion of training for use by both national and international authorities	
8.2 Professional leadership	• Responsibilities of professional leadership for program are clearly stated	• Professional leadership is evaluated at defined intervals with respect to achievement of mission and outcome of FM training	
8.3 Funding and resource allocation	• A clear line of responsibility and authority for budgeting of training resources is defined	• Budget is managed in a way that supports the mission and outcome objectives of training program	

8.4 Administration	• Administration staff is appropriate to support implementation of program ·Good management and deployment of resources is ensured	• Management includes a program of quality assurance ·Management submits itself to regular review	
8.5 Requirements and regulations	• A national body is responsible for defining the numbers and types of recognized specialties within FM • The national body is responsible for other expert functions for which approved training programs are developed	• Definition of approved post-graduate medical training programs in FM is made in collaboration with all relevant stakeholders	

AREA	BASIC STANDARDS ***MUST***	STANDARDS FOR QUALITY DEVELOPMENT ***SHOULD***	Notes
9. CONTINUOUS RENEWAL			
	• Authorities initiate processes for regular review and updating of the structure, function and quality of training ·Authorities rectify identified deficiencies	• Renewal is based on prospective studies and analyses • Revisions of the policies and practices of training programs are done in accordance with past experiences, present activities and futures perspectives Revisions address the following issues: • Adaptation of mission and outcomes to scientific, socio-economic and cultural development of society • Modifications of competencies required in accordance with needs of the environment will be made for the newly trained FM Physician • Adaptation of learning approaches and methods to assure relevance ·Adjustment of structure, content and duration of training in keeping with changes in basic biomedical, clinical, behavioral and social sciences; and changes in demographics, health disease patterns, socioeconomic and cultural conditions • Development of assessment principles and methods according to changes in training Objective. • Adaptation of recruitment of trainees to changing expectations and circumstances, maintaining gender balance, human resource needs, changes in basic medical education, and requirements of the training program. • Adaptation of the recruitment of trainers, supervisors, and teachers according to the changing needs of the training program. • Updating trainers' qualifications and preparation in medical education to meet the needs of trainees • Updating training settings and other resources to the changing needs in postgraduate training. ·Refinement of program monitoring and evaluation • Development of organizational structure and management principles to cope with changing circumstances and accommodation of the different groups of stakeholders • Assessment of adequacy of current funding of FM training programs against intended program goals	

Rationale for Revisions to Postgraduate Training Standards

A comprehensive review informed the revisions incorporated into the updated standards of existing international postgraduate medical education frameworks, including the World Federation for Medical Education (WFME), the Accreditation Council for Graduate Medical Education (ACGME), and the CanMEDS competency framework. Additionally, extensive consultation with Family Medicine educational leadership and a thorough review of the contemporary literature on postgraduate medical education were conducted to ensure alignment with global best practices.

Key Justifications for the Revisions:

1. Patient Safety

   Patient safety is defined as the prevention of errors and adverse effects associated with the delivery of healthcare. A robust safety culture is characterized by shared values, attitudes, and behavioral norms that collectively reinforce an organization's commitment to minimizing patient harm. Training programs must integrate structured patient safety education into their curricula, ensuring that trainees progressively develop autonomy under appropriate supervision. This emphasis aligns with the *WHO Global Patient Safety Action Plan 2021–2030* and evidence-based recommendations from *Canadian Family Physician* (2016), which advocate for embedding patient safety principles within residency accreditation standards.

2. Trainee Safety

   Residency programs must establish institutional policies that safeguard trainees from workplace hazards, including intimidation, harassment, and undue stress. Ensuring a secure training environment—encompassing physical, emotional, and professional well-being—is the joint responsibility of postgraduate medical education (PGME) departments and affiliated institutions. This principle is reinforced by ACGME and CanMEDS standards, which underscore the ethical obligation to protect trainees' welfare.

3. Information Technology (IT) Integration

   The increasing digitization of healthcare necessitates that training programs adopt policies promoting the effective use of information and communication technologies (ICT). Key modalities include electronic health records, e-portfolios, telemedicine, Artificial Intelligence (AI) digital health tools reflecting post-pandemic shifts toward digital healthcare delivery. This revision draws upon contemporary research (*Family Medicine*, 2021), which highlights the need for curricula to adapt to evolving technological demands in patient management.

4. Trainee Wellness

   The literature extensively documents the critical need for structured wellness initiatives in medical training. Residency programs must provide trainees with accessible wellness resources, including evidence-based interventions and support systems. Scholarly reviews (*Postgraduate Medical Journal*, 2023; *Education for Primary Care*, 2021) emphasize that fostering trainee resilience and well-being enhances both educational outcomes and long-term professional sustainability.

5. Remuneration Equity

   The global migration of healthcare professionals, particularly from low- and middle-income countries (LMICs), is exacerbated by inadequate financial compensation during training. Ensuring equitable remuneration reduces financial stressors, allowing trainees to focus on skill acquisition. This consideration is supported by

research (*Human Resources for Health*, 2017), which identifies remuneration disparities as a key driver of workforce attrition.

These revisions collectively aim to enhance training quality, align with international benchmarks, and address emerging challenges in postgraduate medical education.

Annotation of the Standards

1. Mission And Outcomes

1.1 Statements Of Mission And Outcomes

Basic Standard:

The competent authorities **must** define, in consultation with professional organizations, including one specifically dedicated to family medicine and/or primary care, the mission and outcome objectives for family medicine postgraduate medical training and make them known.

The statements of mission and outcomes **must** describe the practice - based training process resulting in a family doctor competent to undertake comprehensive up-to-date family practice in a professional manner, unsupervised and independently or within a team, in keeping with the needs of the health care system.

Quality development:

The mission and outcome objectives **should** encourage appropriate innovation in the training process and allow for development of broader competencies than minimally required and constantly strive to improve patient care that is appropriate, effective and compassionate in dealing with health problems and promotion of health, in the context of the continuing and comprehensive care of patients. The training **should** encourage family medicine trainees to become scholars within family medicine and **should** prepare them for lifelong, self-directed learning and readiness for continuing medical education and professional development.

Annotation:

• *Statements of mission and outcomes* would include general and specific issues in family medicine relevant to national and regional policy.

• *Competent authorities* would include local and national bodies involved in regulation of postgraduate medical training, and could be a national governmental agency, a national board, a university, a competent professional organization or a combination.

• *Types of postgraduate medical training* would include pre-registration training, systematic vocational training, specialist training and other formalized training for expertise in family medicine, leading to recognition as a specialist in Family Medicine, or equivalent in physician's context

• *Scholar* refers to deeper and/or broader engagement in the development of the discipline, including responsibility for education, development, research, management, etc.

1.2 Participation In The Formulation Of Mission And Outcomes

Basic standard:

The statement of mission and outcomes of postgraduate training **must** be defined and adopted by its principal stakeholders.

Quality development:

Formulation of mission and outcomes statements **should** be based on input from a wider range of stakeholders.

Annotations:

• *Principal stakeholders* would include family medicine program directors, family physicians' scientific societies, and trainees in family medicine, as well as appropriate governmental authorities, professional associations and other organizations, and patients.

• *A wider range of stakeholders* would include representation of supervisors, trainers, teachers, other health professions, patients, the community, organizations of family physicians and health care authorities.

1.3 Professionalism And Autonomy

Basic standard:

The training process **must**, based on approved basic medical education, further strengthen professionalism of a family physician.

The training **must** foster professional autonomy to enable the doctor to act in the best interests of the patient, bearing in mind the impact any such advice and/or treatment, if followed, might be perceived or received by the community in which the patient lives and/or works.

Trainees should be offered increasing responsibilities as they advance through their training journey. Faculty should be mindful of competencies achieved and not only in years of training when offering graded responsibilities.

Annotation:

- *Professionalism* describes the knowledge, skills, attitudes and behaviours expected by patients and society from individuals during the practice of their profession and includes concepts such as skills of lifelong learning and maintenance of competence, information literacy, ethical behaviour, integrity, honesty, altruism, service to others, adherence to professional codes, justice and respect for others.

1.4 Training Outcomes

Basic standard:

The relevant competent authorities **must,** in consultation with the family medicine and other appropriate professional organizations, as defined in 1.1, define the competencies, which must be achieved by family medicine trainees as a result of the training programs.

Quality development:

Both broad and specific competencies to be acquired by trainees **should** be specified and linked with, and build upon, the competencies acquired as a result of basic medical education.

Measures of competencies achieved by trainees **should** be used as feedback for program development.

Annotation:

Competencies can be defined in broad professional terms or as an observable ability integrating such components as knowledge, skills, attitudes and behaviours. Competencies relevant for postgraduate training would, for family medicine, include the following areas:

- Provision of long-term person focused (not disease-oriented) care that is appropriate, safe, effective and compassionate for dealing with a comprehensive range of health problems across the spectrum from health promotion and disease prevention, through acute and chronic disease management, as well as rehabilitation and palliation and end of life care. These problems may represent the entry into the health care system and may present in an undifferentiated fashion. Often a single patient has multiple problems requiring simultaneous management over time. A proactive promotion of well-being and both systematic and opportunistic prevention and screening approaches are also required.
- Medical knowledge in the basic biomedical, clinical, behavioural sciences, medical ethics and medical jurisprudence, and the application of such knowledge in patient care
- Interpersonal and communication skills that ensure effective information exchange with individual patients and their families and teamwork with other health professions, the scientific community and the public. This should include the acquisition of the competencies of patient centered care,
    - relationship centered care, or similar concepts.
- Life long learning, including the appraisal and utilization of new scientific knowledge to continuously update and improve clinical practice
- Function as supervisor, trainer and teacher in relation to colleagues, medical students and other health professions
- Capability to be a scholar contributing to development and research in the chosen field of medicine
- Professionalism, committed to the health of patients and community, through ethical practice, and high personal standards of behavior. This includes willingness to acknowledge error and deal with its consequences.
- Knowledge of public health and health policy issues and awareness and responsiveness to the larger context of the health care system, including for example the organization and integration of health care,

partnership with health care providers and managers, practice of cost-effective health care, health economics, and resource allocations

- Ability to understand health care and identify and carry out system-based improvement of care.
- Ability to collaborate with other members of the health care team, as well as with patients, both as individuals and as families.
- Interest and ability to act as an advocate for the patient and community
- Being community-based with a sense of social accountability: understanding the health status and needs of the community served to develop and provide appropriate services. This includes considering the incidence and prevalence of diseases in the community and psychosocial problems including those pertaining to women and children in approaching health care problems

2. Training Process

2.1 Learning Approaches

Basic standard:

Postgraduate medical training **must** follow a systematic family medicine training program. The training **must** be practice – based, in the context within which family medicine is currently delivered and involve the personal participation of the trainee in the service and responsibility of patient care activities in the training sites. These sites must encompass the variety of patients seen in the local family practice context, based in the community as appropriate, with the family physicians taking the primary role in supervision and teaching. The training program must **encompass** and integrate reflective observation, theoretical concepts, active participation and practical experiences.

The training **must** be directed by an overall program and the trainee guided through supervision and regular appraisal and feedback. The training process **must** ensure an increasing degree of independent responsibility as skills, knowledge and experience grow – both to ensure an appropriate training regimen and for patient safety.

Quality development:

Postgraduate medical training **should** interface with basic medical education and continuing medical education/professional development.

Every trainee **should** have access to educational counselling and mentorship support. This should be ongoing and can be formal and informal. Some tracking should be done to ensure learners are getting the support required.

Annotations:

• *Educational counselling and support* would include access to designated trainers or mentors.

2.2 Scientific Methods

Basic standard:

The trainee **must** achieve knowledge of the scientific basis and methods of family medicine, and through exposure to a broad range of relevant clinical/practical experience in different settings appropriate to family medicine, become familiar with evidence-based medicine and critical clinical decision-making specific for the care of family medicine patients.

Quality development:

In the training process the trainee **should** have formal teaching about information management skills, including critical appraisal of literature, quality improvement, scientific data and evidence-based medicine, and be exposed to research.

Program should use and expose trainees to technology when appropriate during the training process such as clinical and evidence based databases.

Annotation:

• Training in scientific basis and methods may include the use of elective research projects to be conducted by trainees

2.3 Training Content

Basic standard:

The training process **must** include the practical clinical work and relevant theory of the basic biomedical, clinical, behavioural and social sciences; primary care clinical decision-making individualized to each patient; communication skills, medical ethics including ethical use of artificial intelligence, quality improvement processes, public health policy, medical jurisprudence and managerial disciplines required to demonstrate professional practice in family medicine.

For the development of an effective family physician, education in the primary care setting is fundamental, although supplemental experiences in secondary and tertiary settings, particularly where family physicians provide care, or where they refer, may be very useful. At least 50% of postgraduate training time should be in family medicine settings, with family physicians as lead teachers and trainers.

Patient safety should be an integral part of the training content – this can be in the form of modules, didactic teaching, reflective exercises, etc.

Note:

While it may be necessary to supplement trainee experience with clinical placements outside of family medicine in order to ensure adequate exposure to the full range of experiences required of family physicians, the learning objectives must be those of family medicine.

The following components **must** be included in the program (*see section 1.4):

- Provision of service to patients across the continuum of health promotion, disease prevention, acute/emergency, chronic, rehabilitative, and palliative care.
- Provision of care across the spectrum of patients (all ages from birth to death, all genders, and with the variety of problems seen in family medicine), with experience in an adequate patient base to experience this diversity in adequate volume for learning and to attain required competencies. This includes assessment, diagnosis, and appropriate management at levels appropriate to the setting, both medical and surgical/procedural.
- The experience of continuity of care – responsibility for a group of patients over time with an appropriate attitude towards the establishment of enduring relationships and ongoing commitment to patients over time, place, and state of health.
- Skills for dealing with undifferentiated patient care problems, such as decision making in the face of uncertainty, and management of the many variables in multisystem disease
- Skill in dealing with the psychosocial and cultural aspects of health care with specific academic programming as well as clinical experiences directed towards learning in this area.
- Communication skills in general, including specific interviewing skills such as dealing with difficult encounters with patients and families, communicating uncertainty to patients, and the ability to engage the patient in decision-making.
- Knowledge and understanding of the doctor patient relationship, including issues of appropriate boundaries and issues of intimacy and power dynamics in that relationship
- Knowledge of bioethics, and understanding of a framework for bioethics, with ability to apply it in the clinical decision-making process.
- Familiarity with medical legal issues relevant to their own setting
- An understanding of quality assurance as applied to family practice, with skills to assess the performance of some aspects of care delivered by the practitioner personally.

The appropriate use of medical records and communication with other health care providers

- Basic understanding of community medicine/public health, including an understanding of the non-biologic determinants of health and the impact of these on patients seen and the community served.
- An understanding of the concepts of health promotion and disease prevention, with an ability to actively engage in these dimensions of care in the practice setting
- Knowledge of the health care system, including use of community resources in providing care to patients where the family physician functions as the coordinator of such care.

Quality development:

The training process **should** ensure development of knowledge, skills, attitudes and personal attributes in the roles as family medicine expert, health advocate, communicator, collaborator and team-worker, scholar, administrator and manager, and professional.

The teaching of patient safety can incorporate systems design to improve patient care and safety such as using validated communication tools aimed at minimizing medical error.

Include trainees and a wide number of faculty to provide feedback to understand learning gaps in patient safety to reinforce future learning.

2.4 Training Structure, Composition And Duration

Basic standard:

The overall composition, structure and duration of training and professional development **must** be described with clear definition of goals and expected task-based outcomes and explanation of their relationship to basic medical education and health care delivery. Components that are compulsory and optional **must** be clearly stated.

Quality development:

Annotations:

•Integration of practice and theory should be ensured in the training process and integrate technology and e-learning when appropriate.

• *Structure of training* refers to the overall sequence of attachment to the training settings and responsibility of the doctor and not the details of the training experiences.

• *Integration of practice and theory* would include didactic learning sessions and supervised patient care experiences.

2.5 The Relationship Between Training And Service

Basic standard:

The apprenticeship nature of professional development **must** be described and respected and the integration between training and service (on-the-job training) **must** be assured through formal agreements.

Trainees **must** have assigned supervision to guide learning during their service activities.

Teaching programs should ensure appropriate remuneration for clinical service provided and a livable wage for trainees.

Quality development:

The capacity of the health care system **should** be effectively utilised for service-based training purposes.

The training provided **should** be complementary and not subordinated to service demands.

Trainees **should** have a permanent family physician advisor throughout the training program to provide career guidance and mentorship.

Annotations:

• *Integration between training and service* implies on one hand delivery of proper health care service by the trainees and on the other hand that learning opportunities are embedded in service functions.

• *Effective utilization* refers to optimising the use of different clinical settings, patients and clinical problems for training purposes, and at the same time respecting service functions.

2.6 Management Of Training

Basic standard:

The responsibility and authority for organizing, coordinating, managing and assessing the individual training setting and the training process **must** be clearly identified.

Coordinated training within family medicine must **be** ensured to gain exposure to different clinical and management areas of the discipline.

Quality development:

The authority responsible for the training program should be provided with resources for planning and implementing methods for training, assessment of trainees and innovations of the training program.

There should be representation of family medicine education experts, trainees and other relevant stakeholders in the planning of the training program.

Annotation:

• *Other relevant stakeholders* could include other participants in the training process, representatives of other health professions and health authorities

3. Assessment

3.1 Assessment Methods

Basic standard:

Postgraduate medical training **must** include a process of and the competent authorities **must** define and state the methods used for assessment of trainees, including the criteria for passing final examinations and other types of assessment. Assessment **must** emphasize formative in-training methods and constructive feedback.

Quality development:

The reliability and validity of assessment methods **should** be documented and evaluated, and the use of external family medicine specialist examiners **should** be encouraged. A complementary set of assessment method **should** be applied. The different stages of training acquisition and formative assessments **should** be recorded in a training log-book/portfolio. An appeal mechanism concerning assessment results **should** be established and, when necessary, second opinion, change of trainer/supervisor or supplementary training **should** be arranged.

Annotations:

• The *definition of methods used for assessment* may include consideration of the balance between formative and summative assessment, the number of examinations and other tests, the balance between different types of examinations, the use of normative and criterion - referenced judgements, and the use of portfolio and special types of examinations, e.g. objective structured clinical examinations (OSCE).

• *Evaluation of assessment methods* may include an evaluation of how they promote training and learning.

• *External examiners* are experts in family medicine not previously involved with the trainee and may provide not only objective assessment but may also bring global perspectives.

Supplemental time in training and remediation learning material should be available and guided by assessments and identified knowledge deficiency areas.

3.2 Relation Between Assessment And Training

Basic standard:

Assessment principles, methods and practices **must** be clearly compatible with training objectives and **must** promote learning. Assessment must document the trainee's progress through the program, and at completion, readiness for the practice of Family Medicine.

Quality development:

The assessment methods and practices **should** encourage integrated learning and **should** assess predefined practice requirements as well as knowledge, skills and attitudes. The methods used **should** encourage a constructive interaction between clinical practice and assessment.

3.3 Feedback To Trainees

Basic standard:

Constructive feedback and coaching on the performance of the trainee **must** be given on an ongoing basis.

Quality development:

Acceptable standards of performance **should** be explicitly specified and conveyed to both trainees and supervisors.

Annotation:

• *Feedback and coaching* would include assessment results and planned dialogues about clinical performance between trainees and trainers/supervisors with the purpose of ensuring instructions and remedies necessary to enhance competence development.

4. Trainees

4.1 Admission Policy And Selection

Basic standard:

The competent authorities and family medicine professional organizations **must** agree upon a policy on the criteria and process for selection of trainees and **must** publish and implement it.

Quality development:

The selection policy **should** define cognitive and non-cognitive criteria, which considers specific capabilities of potential trainees in order to enhance the result of the training process in family medicine. The selection procedure **should** be transparent and admission open to all qualified graduates from basic medical education. The selection procedure **must** include a mechanism for monitoring and appeal.

Annotations:

- The statement on *process of selection of trainees* would include both rationale and methods of selection and may include description of a mechanism for appeal.
- *Monitoring of admission policies would* include improvement of selection criteria, to reflect the capability of trainees to be competent and to cover the variations in required competencies related to diversity of family medicine.
- *Criteria for selection* may sensitively include, where locally appropriate, gender, ethnicity and other social requirements, including the potential need of a special admission policy for physicians from underserved populations (for example, from rural areas).

4.2 Number Of Trainees

Basic standard:

The number of trainees **must** be balanced for the clinical/practical training opportunities, supervisory capacity and other resources available in order to ensure training and teaching of adequate quality.

Quality development:

The number of trainees **should** be reviewed through consultation with relevant stakeholders. Recognising the inherent unpredictability of physician resource needs in the various fields of medicine, the number of training positions **should** currently be changed with careful attention to existing needs of the community and society and the market forces.

Annotations:

• *Stakeholders* would include those responsible for planning and development of human resources in the local and national health sector.

• Forecasting of the *needs of the community and society* for trained physicians includes estimation of various market and demographic forces as well as the scientific development, migration patterns of physicians, etc

4.3 Support And Counselling Of Trainees

Basic standard:

The competent authorities **must,** in collaboration with the Family Medicine profession, ensure that a system for support, counselling and career guidance of trainees is available.

Quality development:

Counselling **should** be provided based on monitoring the progress in training and incidents reported and **should** address social and personal needs of trainees.

Annotation:

• *Social and personal needs* would include professional support, health problems, housing problems and financial matters.

Well established wellness programs should be developed and/or emphasized to ensure an approach to wellness is prominent in the training program. Resources should be available to all trainees but those struggling should be offered specific and tailored support.

4.4 Working Conditions

Basic standard:

Postgraduate training **must** be carried out in appropriately remunerated posts/stipendiary positions in family medicine and **must** involve participation in all medical activities commonly expected of family physicians, which may include on-call duties, thereby devoting professional activities to practical training and theoretical learning throughout standard working time. The service conditions and responsibilities of trainees **must** be defined and made known to all parties.

Quality development:

The service components of trainee positions **should** not be excessive, and the structuring of duty hours and on-call schedules **should** consider the needs of the patients, continuity of care and the educational needs of the trainee. Part-time training **should** be allowed under special circumstances, determined by the competent authorities and structured according to an individually tailored program and the service background. The total duration and quality of part-time training **should** not be less than those of full-time trainees. Interruption of training for reasons such as pregnancy (including maternity/paternity leave), sickness, military service or secondment **should** be replaced by additional training.

Annotations:

• *Contractual service positions* would include internship, residency, registrar, senior registrar, etc.

• *The service components of trainee positions* must be subject to definitions and protections embodied in the contract.

Benchmarking compensation to similar clinical and teaching institutions to ensure fair and appropriate process to define compensation.

4.5 Trainee Representation

Basic standard:

There **must** be a policy on trainee representation and appropriate participation in the design and evaluation of the training program, the working conditions and in other matters relevant to the trainees.

Quality development:

Organizations of trainees **should be** encouraged to be involved in decisions about training processes, conditions and regulations.

Annotation:

• *Trainee representation* would include participation in groups or committees responsible for program planning at the local or national level.

5. Staffing

5.1 Appointment Policy

Basic standard:

The policy on appointment of trainers, supervisors and teachers **must** specify the expertise required and their responsibilities and duties. The policy **must** specify the duties of the training staff and specifically the balance between educational and service functions and other duties. Family physicians **must** have the primary role in educating trainees in the program.

Quality development:

All physicians **should** as part of their professional obligations recognise their responsibility to participate in the practice-based postgraduate training of medical doctors. Participation in postgraduate training of trainees in family medicine **should** be rewarded. The staff policy **should** ensure that trainers generally are current in the relevant field to its full extent and sub-specialised trainers only approved for relevant specific periods during the training.

Annotations:

- *Training staff* would include family physicians, other medical doctors and health personnel from other professions
- Other duties would include administrative functions as well as other educational or research responsibilities.

5.2 Obligations And Development Of Trainers

Basic standard:

Teachers and trainers **must** be prepared for their educational roles with family medicine trainees and must be informed of their teaching responsibilities. Instructional activities **must** be included as responsibilities in the work-schedules of trainers and their relationship to work-schedules of trainees **must** be described.

Quality development:

Staff policy **should** include support of trainers including an organized program for training as teachers and educators, as well as other opportunities for development and advancement in this role. There **should** be policy

to appraise and recognise meritorious academic activities, including functions as trainers, supervisors and teachers. The ratio between the number of recognised trainers and the number of trainees **should** ensure close personal interaction and monitoring of the trainee.

Annotation:

- *Preparation for educational roles* would include opportunities to develop an understanding of educational methods and teaching strategies appropriate to the context.

- *An organized program for training as teachers and educators* would provide structured activities, allowing teachers to develop through the stages from novice, competent, proficient, and in some cases expert educators.

- *Recognition of meritorious academic activities* would be by rewards, promotion and/or remuneration.

Efforts should be made to ensure trainees learn in context specific to their patient population and geography in which they will eventually practice.

6. Training Settings And Educational Resources

6.1 Clinical Settings And Patients

Basic standard:

The training locations **must** be selected and recognized by the competent authorities and **must** have sufficient clinical/practical facilities to support the delivery of training. Training locations **must** have a sufficient number of patients and an appropriate case-mix to meet training objectives. The training **must** expose the trainee to a broad range of experience in family medicine appropriate to the local context for practice, such as office (surgery/outpatient) and inpatient/hospital care and on-duty (on-call) activity. The number of patients and the case-mix **must** allow for clinical experience in all aspects of family medicine, including training in promotion of health and prevention of disease. On-line or electronic means to provide distance education may be useful adjuncts to clinical training experiences.

Quality development:

The quality of training settings **should** be regularly monitored, including ensuring that trainees are each following a group of family practice patients over time and place, and are seeing diverse problems representative of the spectrum of problems in the discipline.

Annotations:

- *Office or outpatient-based settings* would include ambulatory settings where patients receive first-contact care

- Inpatient or hospital care settings would include those where patients are admitted for brief or long terms.

- *The quality of training settings* can be evaluated through site visits, for example.

6.2 Physical Facilities And Equipment

Basic standard:

The trainee **must** have space and opportunities for practical and theoretical study and have ready access to adequate professional literature as well as equipment for training in practical techniques such as procedural skills. There **must** be access to tools of information management in the areas where patient care is provided.

Quality development:

The physical facilities and equipment for training **should** be evaluated regularly for their appropriateness and quality regarding postgraduate training.

Annotation location would include e.g. lecture halls, tutorial rooms, libraries, and information technology equipment.

- Tools of information management include paper resources such as clinical practice guidelines, recent summaries of research evidence etc, not exclusively electronic tools

6.3 Clinical Teams

Basic standard:

The clinical training **must** include experience in working as a team with family physicians and other health professionals.

Quality development:

The training process **should** allow learning in a multi-disciplinary team resulting in the ability to work effectively with family physicians and other health professions as a member or leader of the health care team.

6.4 Information Technology

Basic standard:

There **must** be a policy addressing the effective use of information and communication technology in the training program with the aim of ensuring relevant patient management.

Quality development:

Trainers and trainees **should be** competent to use information and communication technology for self- learning and in accessing data information and working in health care systems.

Annotations:

• A policy regarding the use of information and communication technology which may be print-based as well as computers, internal and external networks and would include coordination with the library services of the relevant institutions.

• The use of information and communication technology may be part of education for evidence-based medicine and in preparing the trainees for continuing medical education and professional development.

6.5 Research

Basic standard:

There **must** be a policy that fosters the application of research into practice in training settings.

Quality development:

Opportunities for combining clinical training and research **should** be made available. Trainees **should** be encouraged to engage in health quality development and research, including qualitative research.

6.6 Educational Expertise

Basic standard:

There **must** be a policy on the use of educational expertise relevant to the planning, implementation and evaluation of training.

Quality development:

Access to educational experts **should** be available and evidence demonstrated of the use of such expertise for staff development and for research in the discipline of postgraduate medical education pertinent to family medicine.

Annotations:

• *Educational expertise* would deal with problems, processes and practice of postgraduate medical training and assessment, and would include medical doctors with experience in

medical education, educational psychologists and sociologists, etc. It can be provided by an education unit at the institution or be acquired from another national or international institution.

• *Medical education research* investigates the effectiveness of training and learning methods, and the wider institutional context.

6.7 Training In Other Settings And Abroad

Basic standard:

There **must** be a policy on accessibility of individualized training opportunities at other sites within or outside the country fulfilling the requirements for the completion of training and for the transfer of training credits.

Quality development:

Regional and international exchange of academic staff and trainees **should** be facilitated by the provision of appropriate resources. The competent authorities **should** establish relations with corresponding national or international bodies with the purpose of facilitating exchange and mutual recognition of training elements.

Annotation:

• Transfer of *training credits* can be facilitated through active program coordination between training institutions.

7. Evaluation Of Training Process

7.1 Mechanism For Program Evaluation

Basic standard:

The relevant authorities and the profession **must** establish a mechanism for evaluation of the training program that monitors the training process, facilities and progress of the trainee, and ensures that concerns are identified and addressed.

Quality development:

Program evaluation **should** address the context of the training process, the structure and specific components of the program and trainee and other outcomes.

Program evaluation should be done at a timely interval and based on multisource feedback.

Annotations:

• *Mechanisms for program evaluation* would imply the use of valid and reliable methods and require that basic data about the training program are available. Involvement of experts in medical education and assessment would further broaden the base of evidence for quality of postgraduate training.

• *Identified concerns* would include problems presented to program committees, trainers and tutors, etc.

• *The context of the educational process* would include the organization and resources as well as the learning environment

• *Specific components for program evaluation* would include training program description and performance of trainees

• *General outcomes* would be measured e.g. by career choice and performance.

7.2 Feedback From Trainers And Trainees

Basic standard:

Feedback about program quality from both trainers and trainees **must** be systematically sought, analysed and acted upon.

Quality development:

Trainers and trainees **should** be actively involved in planning program evaluation and in using its results for program development.

Annotation:

• *Feedback about program* would include trainee reports about conditions in their program and clinical sites.

7.3 Using Trainee Performance

Basic standard:

The performance of trainees **must** be evaluated in relationship to the training program and the mission of postgraduate family medicine education.

Quality development:

The performance of trainees **should** be analysed in relation to background and entrance qualifications, and **should** be used to provide feedback to the committees responsible for selection of trainees and for program planning and counselling.

Annotation:

• Measures of *trainee performance* would include information about average duration of training, scores, pass and failure rates at examinations, success and dropout rates, as well as time spent by the trainees on areas of special interest. Performance of trainees after graduation, including practice location and scope of practice would also be useful.

7.4 Authorization And Monitoring Of Training Settings

Basic standard:

All training programs **must** be authorised by a competent authority based on well-defined criteria and program evaluation and with the authority able to grant or, if appropriate, withdraw recognition of training settings or theoretical courses.

Quality development:

The competent authorities **should** establish a system to monitor training settings and other educational facilities via site visits or other valid and reliable means.

Annotation:

• *Criteria* for authorization of training settings would include minimal values for number and mix of patients, equipment, library and IT facilities, training staff and training program.

7.5 Involvement Of Stakeholders

Basic standard:

The processes and outcome of evaluation **must** involve the managers and administration of training settings, the trainers and trainees and be transparent to all stakeholders.

Quality development:

The processes and outcome of evaluation should be credible to the principal stakeholders

Annotations:

• *Stakeholders would* include the medical professional organizations, other health professions, health authorities and authorities involved in training of doctors and allied health personal, hospital owners and providers of primary care, patients and patient organizations.

• *Principal stakeholders* include trainers, trainees and health authorities.

8. Governance And Administration

8.1 Governance

Basic standard:

Training **must** be conducted in accordance with regulations concerning structure, content, process and outcome issued by competent authorities. Completion of training **must** be documented by degrees, diplomas, certificates

or other evidence of formal qualifications conferred as the basis for formal recognition as a competent family physician by the designated authorities. The competent authority **must** continually assess training programs, training institutions and trainers. The competent authority **must** be responsible for setting up a program for quality training.

Quality development:

Procedures **should** be developed that can verify the documented completion of training for use by both national and international authorities.

Annotation:

• *Recognition as a competent family physician* would, depending on the level of training, include doctors with the right to independent practice, specialists in specific areas of family practice, experts, etc.

8.2 Professional Leadership

Basic standard:

The responsibilities of the professional leadership for the postgraduate medical training program **must** be clearly stated.

Quality development:

The professional leadership **should** be evaluated at defined intervals with respect to achievement of the mission and outcomes of postgraduate family medicine training.

8.3 Funding And Resource Allocation

Basic standard:

There **must** be a clear line of responsibility and authority for budgeting of training resources.

Quality development:

The budget **should** be managed in a way that supports the mission and outcome objectives of the training programs and of the service.

Annotation:

• *Budgeting of training resources* would depend on the budgetary practice in each institution and country.

8.4 Administration

Basic standard:

The administrative staff of the postgraduate medical training programs and training institutions **must** be appropriate to support the implementation of the program and to ensure good management and deployment of its resources.

Quality development:

The management **should** include a program of quality assurance and the management **should** submit itself to regular review to achieve quality improvement.

8.5 Requirements And Regulations

Basic standard:

A national body **must** be responsible for defining the number and types of recognised specialties within family medicine and other medical expert functions for which approved training programs are developed.

Quality development:

Definition of approved postgraduate medical training programs **should** be made in collaboration with all relevant stakeholders.

Annotations:

• *A national body* established according to national laws and regulations would act in the interests of society as a whole.

• *Relevant stakeholders* would include national and local health authorities, universities, medical professional organizations, the public, etc.

9. Continuous Renewal

Basic standard:

In realising the dynamics of postgraduate medical training, the relevant authorities must initiate procedures for regular review and updating of the structure, function and quality of the training programs and must rectify identified deficiencies.

Quality Development:

The process of renewal should be based on prospective studies and analyses and should lead to the revisions of the policies and practices of the postgraduate medical training programs in accordance with past experience, present activities and future perspectives. In so doing it should address the following issues:

- Adaptation of the mission and outcome objectives of postgraduate training to the scientific, socio-economic and cultural development of the society.
- Modification of the competencies required on completion of postgraduate training in family medicine in accordance with the needs of the environment the newly trained doctor will enter.
- Adaptation of the learning approaches and training methods to ensure that these are appropriate and relevant.
- Adjustment of the structure, content and duration of training programs in keeping with the developments in
- the basic biomedical sciences, the clinical sciences, the behavioural and social sciences, and changes in the demographic profile and health/disease pattern of the population, and in socio-economic and cultural conditions.
- Development of assessment principles and methods according to changes in training objectives and methods.
- Adaptation of recruitment policy and methods of selection of trainees to changing expectations and circumstances, maintaining an appropriate gender balance, human resource needs, changes in basic medical education and the requirements of the training program.
- Adaptation of recruitment and policy of appointment of trainers, supervisors and teachers according to changing needs in postgraduate training.
- Updating of trainers' qualification and preparation in medical education to meet the needs of trainees
- Updating of training settings and other educational resources to changing needs in postgraduate training, i.e. the number of trainees, number and profile of trainers, the training program and contemporary training principles.
- Refinement of the process of program monitoring and evaluation.
- Development of the organizational structure and management principles in order to cope with changing circumstances and needs in postgraduate training and, over time, accommodating to the interests of the different groups of stakeholders.
- Assessment of the adequacy of current funding for the family physician training program against intended program goals.
